

What are we doing here? What makes the difference?

Taken from SQLSERVERCENTRAL web source -- recursive-hierarchy example

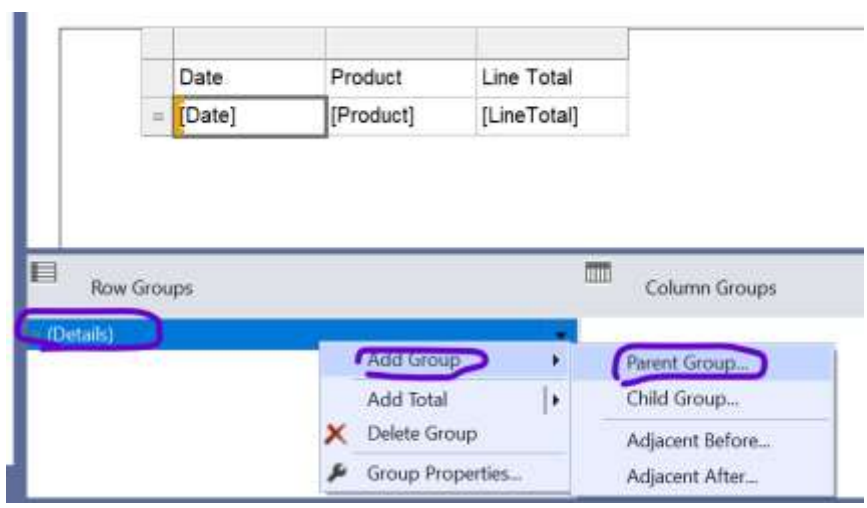

Following script: part of steps from total-steps while configuring recursive-hierarchy

- What did we do here?
- It looks different from creating a parent group over a detail group; what makes the difference?

Following Screenshot: Creation of row-group with a parent-group

Date	Product	Line Total
[Date]	[Product]	[LineTotal]

Table Group

Group by: [Date]

Show detail data

Add group header

Add group footer

Help OK Cancel

Date	Product	Line Total
[Date]	[Product]	[LineTotal]

Row Groups
